## System Requirements For Perfect Fire Screensaver:

The hardware you need should be pretty standard. The engine is a graphical addition so you don't need anything exotic. The requirements we have listed for the system are really just to make sure you can play the game. While the engine supports Widescreen, you can use any resolution you want to. However, the window size in the editor is 480x360 which isn't really good if you want to do anything other than watch the progress meter on the main menu. Game details: Playing for free from the Demon City chapter Random Story Characters
